Michael Brad  
Brabs Auto Corp.

Dear Sir:

From your company's website I learned about your need for a design engineer for the Maryland area.

As an experienced and strongly motivated engineer – with University Bachelor degree - I am very interested in this position and generally in automotive industry. During my career I learned a lot about technical design. I contributed to success of two cars: Mini 678 and TOU 987. I have got working knowledge of manufacturing process eg. metal stamping, casting, CAD systems and formal process in construction. I have a strong background in computer design, software development and believe these skills would benefit your company.

I know Brabs is a leading producer of high quality occupant safety systems and I would like to be a part of this professional team. I am ready for trainings in Germany. I have good communication and interpersonal skills

Enclosed is a copy of my resume, which more fully details my qualifications for the position. I look forward to put my experience into practice in your company and would like to show my abilities in the direct conversation.

Sincerely

Lionel Branson
